

The 04-24-2024 JCapper Main Module Only Program Download Package:

My primary reason for publishing a program update today is to deliver active user logons to those who have recently joined the JCapper user community.

This is also an interim program update that delivers some useful new features and completed work as I build out the many new features planned for JCapper over the next several months. (This Release Notes PDF last updated: 04-24-2024 at about 04:19 pm pacific time.)

Note: The What's Inside Notes below are a hint about *some* of what's coming.

I'll be publishing a new Full Program Update in the next few weeks but needed to publish this Main Module Only Program Update today to deliver new active user logons.

What's Inside –

EICA .CSV File Logic:

Although not active just yet - The Main Module in this download contains the framework for a major new feature that will be delivered a few weeks from now in the next Full JCapper Program Update:

EICA.csv Files. EICA is an acronym that stands for **Everything I Care About**.

It's a big .csv file, one row per horse, more than 2500 columns wide, and has sections for .JCP File Data (1435 cols), HDW Chart Results Data (255 cols), PI_Profile.txt Data (650 cols), and StarterHistory Data (255 cols.)

Everything I Care About in one .csv file.

One EICA file per active data folder updated with each DBBuild routine - provided the setting is toggled On in the Enhanced Settings Module.

The idea behind this is Big Data. Import your EICA.csv files into third party tools like Python, Microsoft SQL Server, etc.

After installing this download JCapper Platinum users should discover:

1. The Main Module delivered by this download recognizes you as a Registered Program Owner.

Who Should Install This Download:

If you see an expiration date after you log into the JCapper Main Module – or if you want the latest published JCapper program version: *You should install this download ASAP.*

If you are upgrading to Platinum from Silver: *You should install the latest FULL JCapper Program Update **first** – then install this Main Module Only Program Update **afterwards**.*

Install Instructions:

1. Close down all open JCapper program windows, log into the JCapper message board and navigate to the Build 198 program downloads page.
2. Save the Main Module Only Special Download Package (published 04-24-2024) - filename: MainModuleOnlyBuild198_04242024.exe to your hard drive. (Hint: c:\JCapperBuild is a good location to save it.)
3. Right-click the download package file (filename: MainModuleOnlyBuild198_04242024.exe) and select Run As Administrator to run the extractor.

The extractor will copy the .exe file for the JCapper Main Module (and only the Main Module) to your c:\JCapper\Exe folder, overwriting the existing .exe file for the Main Module (filename: JCapper_2023.exe) - and then on most machines, will launch the Main Module.

That's It!

Enjoy,

-jp
